

Release Statement
ABS CSR SafeShip for Tankers
Release 6.8
Patch 5, 21 February 2007

Patch 5 to Version 6.8 of the ABS SafeShip CSR Software for Tankers is being distributed because of a potentially serious issue. ABS was notified in late January by the developer of the ultimate strength calculation routine (PULS) embedded in the software that a line of code had been inadvertently included that will render the software inoperable on 15 March 2007. While we regret any inconvenience this may cause, it is imperative that all users of the ABS SafeShip CSR for Tankers software install this patch prior to 15 March 2007 in order to avoid any problems.
